SECTION 1

Executive Summary

LV Construction is a Los Angeles general contractor building 30–200 unit multifamily (Type IIIA–V) projects. Its plan combines a Base Case of 11 in-place projects ($238M of contract value) with an Extended Business Development pipeline of 30 additional deals ($480M), signed on a roughly bimonthly cadence, for a total contracted volume of approximately **$718M across 43 projects**. The BD pipeline is led by Tom Taggart (Director of Business Development, fully allocated to LV) under partner oversight from Chris Aiello (Principal) and Bob Kennedy (Legal & Deal Closing).

The combined plan generates **$19.4M of cumulative consolidated net income through FY2033** — a swing of more than $40M versus the Base Case alone, which runs negative on a cumulative basis as standalone overhead outpaces in-place fee income. The pipeline is the revenue engine: it funds the Mission Control buildout and justifies the investment on its own merits.

Mission Control is the AI operating system that lets LV run this pipeline with a lean team. It automates roughly 90% of the coordination work that currently caps project capacity, and layers an estimated **~$8.7M of incremental value** on top of the baseline — taking cumulative NI toward **~$28M**.

$718M	$99.3M	$79.4M	$19.4M
CONTRACTED GMP	PEAK BILLING (FY30)	CUM. GROSS PROFIT	CUM. NI FY26–33

SECTION 2

The Opportunity

Construction is a $2 trillion industry running on spreadsheets, phone calls, and PDFs. Within that market, project-based GCs scale linearly: every new project demands proportional back-office overhead.

Mission Control breaks that relationship. By automating 90% of coordination work, a new project requires only on-site staffing — a superintendent and a field engineer. The project managers, coordinators, and accounting team absorb the incremental back-office load through the platform. The result is a structurally higher-margin, more scalable GC than the conventional model allows.

SECTION 3

The Product: Mission Control

Six modules on one platform, trained on LV Construction's own project data.

1. **Document Intelligence** — RFIs, submittals, and contracts drafted in minutes, not days.
2. **Cost Tracking** — real-time field progress tied to commitments and billing.
3. **Schedule Management** — S-curve distributions updated daily from field data.

4. **Compliance Monitoring** — subcontractor insurance and COI tracked continuously.
5. **Draw Packages** — assembled automatically from cost data and photo evidence.
6. **Field Operations** — three-tap capture replaces daily reports.

The CEO opens the Command Dashboard each morning to a portfolio-wide status — schedule variance, cost-to-complete, open RFIs, and compliance exceptions surfaced automatically. Superintendents log progress with three taps and a photo; the platform does the rest.

SECTION 4

The Revenue Engine: Base Case + Extended BD

The Extended BD plan is the revenue engine. Tom Taggart sources 30 deals (21 at $15M and 9 at $18M GMP), signed on a roughly bimonthly cadence, with partners co-sourcing the top of the pipeline by GMP and gating every contract execution.

Schedule 1 — Consolidated pro forma summary ($ in millions, by fiscal year; FY ends June 30)

Line	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33
Construction billing	58.8	87.4	66.0	88.0	99.3	95.9	96.5	73.8
Gross profit	6.5	9.2	9.5	10.5	11.9	11.6	11.6	8.7
LV (GC) net income	2.3	1.9	2.1	3.6	4.9	4.4	4.4	1.5
Six Peak net income	(1.0)	(0.6)	(0.8)	(1.0)	(1.0)	(0.9)	(0.8)	0.4
Consolidated net income	**1.3**	**1.3**	**1.3**	**2.6**	**3.9**	**3.5**	**3.6**	**1.9**
Cumulative consolidated NI	1.3	2.6	3.9	6.5	10.4	13.9	17.5	19.4

Source: Annual Summary, updated pro forma (Base Case in-place + LV BD extended). Recalculated May 2026.

Horizon note. Cumulative consolidated net income is the running total of LV (GC) net income plus Six Peak net income from the Annual Summary of the updated pro forma (Base Case in-place + LV BD extended). The FY2026–33 figure of $19.4M is the cumulative peak; including the FY2034 wind-down (a −$3.2M year, as projects complete while overhead continues) brings the full-horizon total to $16.3M.

SECTION 5

The Multiplier: Mission Control Uplift

Mission Control does not generate new revenue. It extracts more margin from the revenue the pipeline already delivers, through two mechanisms.

1. **Margin expansion (~150 bps).** Faster draws, RFI cycle time from 30 minutes to 5, change-order discipline, and better schedule adherence lift margin by roughly 150 basis points on the $480M of BD volume — about **$7.2M** of incremental NI.

2. **Deferred next-wave hiring (~$1.5M).** The project-triggered hires cover existing portfolio coordination through FY2027; the platform then lets each new hire serve more concurrent projects, deferring roughly $300K/year of next-wave back-office hiring — about **$1.5M** over the plan horizon.

> **The pipeline is the juice; Mission Control is the multiplier.** Combined illustrative uplift of **~$8.7M** takes cumulative consolidated NI from $19.4M to approximately **$28M**. The uplift is a modeling overlay on top of the pro forma — not a line item within it — and reflects management estimates pending validation through the first two modules.

SECTION 6

Funding & Structure

The contracted pipeline funds the Mission Control buildout. A $5M investment — equity raise or retained-earnings reinvestment — covers platform development, key hires, and Year 1–2 operating runway.

The buildout is structured inside a C-Corp conversion that preserves QSBS optionality under Section 1202. The investment is paid back through Mission Control uplift in roughly 24 months. See the companion Entity Restructuring and QSBS papers for full detail.

SECTION 7

Scaling Team & Organization

The organization is an approximately 35-person team, with project-triggered hires limited to on-site roles.

- 1 Principal (Chris Aiello) and the partner group
- 4 Project Managers and 4–5 Assistant PMs (held down via platform absorption)
- 6–8 Superintendents and 2 Field Engineers
- 3 Coordinators plus corporate finance (CFO, Controller)
- The AI team: Translator, Head of AI Ops, Process Engineer, Full-Stack, AI/ML, Data Engineer, CV Specialist

SECTION 8

Risks & Mitigants

Risk	Mitigant
Talent	Construction-AI Translator as the critical first hire; 18–24 month engagement; technical co-founder fallback.
BD pipeline closure	Conservative bimonthly cadence; partner oversight; weekly LADBS / CTCAC / CoStar monitoring; baseline funds the platform even in the bear case.
Platform build	Six modules over 18 months with gate reviews at months 6, 12, and 18; go/no-go on each sprint.
Margin-uplift assumption	150 bps is a working estimate, validated through the first two modules (Document Intelligence + Cost Tracking) by month 12.

SECTION 9

Master Timeline

Milestone	Target
Construction-AI Translator engaged	Mid 2026
Sprint 1: Document Intelligence + Cost Tracking	Months 1–6
First BD deal signed; first project on platform	Late 2026 / early 2027
Sprint 2: Scheduling + Compliance	Months 7–12
Full six-module platform live	Month 18–24
Peak concurrent projects	FY2030–31
Model horizon ends	FY2033 (FY2034 wind-down)
