

SECTION 1

Twelve Accounting Workflows

Accounting automation is built into Mission Control from Sprint 1. The twelve workflows carry an average automation score of **8.6/10**; projected coordination-overhead reduction is 68–72%.

#	Workflow	Current state	Score
1	AP invoice intake	Email + spreadsheet log	9.2
2	AP matching (3-way)	Manual PO/invoice/receipt	9.0
3	Subcontractor pay apps	G702/G703 review by hand	8.8
4	Lien-waiver tracking	Spreadsheet, reminders	8.5
5	Draw-package assembly	2–3 day manual process	9.0
6	Job-cost coding	PM reviews each invoice	8.2
7	Change-order accounting	Manual entry to GL	7.8
8	Revenue recognition	Monthly close, manual %-complete	8.5
9	Payroll job-cost allocation	Timesheet + spreadsheet	7.5
10	Sub insurance / COI	Master spreadsheet	9.5
11	Bank reconciliation	Monthly by controller	8.0
12	Financial reporting	Manual consolidation	8.8

SECTION 2

Subcontractor Insurance / COI System

The COI system is the highest-scoring automation opportunity (9.5/10) and one of the biggest compliance risks in the current manual process.

Current state

- Master spreadsheet tracks ~40 active subcontractors x 4 insurance policies each
- Renewal dates tracked manually; gaps discovered only at audit or claim time
- Time cost: ~8 hours/week across PMs and the Controller

AI-powered COI system

- **Intake:** sub uploads COI → AI extracts policy type, limits, expiration, named insured
- **Verification:** auto-compares extracted terms against LV's master requirements per contract type
- **Continuous monitoring:** daily expiration check; alerts at 30/15/3 days
- **Certificate requests:** auto-generated renewal emails to sub + broker at the 30-day mark
- **Audit trail:** every COI stored, versioned, and searchable with provenance

Sprint 1 Scope & Stakeholders

Accounting automation launches with Sprint 1 (months 1–6) alongside Document Intelligence and Cost Tracking. Workflows 1, 2, 3, 5, and 10 are in scope for Sprint 1; the remainder ship in Sprints 2–3.

Mission Control treats the CFO and Controller as integrated platform stakeholders, not downstream consumers. They configure accounting rules, override AI classifications when needed, and review the month-end close package the platform assembles. The goal is not to replace accounting judgment but to eliminate the data-entry and reconciliation work that consumes roughly 70% of accounting time.
