

ROLE 01

Construction-AI Translator

HIRE WINDOW: MONTH 1

About the role. Bridge LV's field staff (PMs, superintendents) with the AI engineering team, ensuring the platform solves the coordination problems people face daily. Shadow 2–3 projects for the first 30 days; translate field workflows into engineering requirements; lead weekly reviews; train field staff on each module; own field-adoption metrics (80%+ daily-report capture).

What we need. 5–10 years in construction PM or superintending (multifamily preferred); technical inclination (coding, scripting, or AI experimentation); exceptional written communication; comfort with ambiguity.

Compensation. \$220K base + 2% of the employee equity pool (18–24 month engagement, FT conversion path at Month 12).

ROLE 02

Head of AI Operations

HIRE WINDOW: MONTH 3–4

About the role. Run the AI engineering team end-to-end, reporting to Chris Aiello. Own the sprint roadmap (Sprint 1 through Sprint 3); hire and manage the engineering team; present at the month 6/12/18 gate reviews; partner with the Translator on adoption; own the platform reliability SLA (99.5%+ after Month 12).

What we need. 8+ years in engineering leadership at a construction-tech or enterprise SaaS company; shipped production ML at scale; proven ability to hire top-quartile engineers; construction fluency a plus.

Compensation. \$280K base + 4% of the employee equity pool + a share of the Mission Control profit pool.

ROLE 03

AI/ML Engineer (Lead)

HIRE WINDOW: MONTH 6–8

About the role. Technical lead for the AI layer: LLM orchestration, evaluation, and fine-tuning. Design the document-intelligence pipeline (OCR + LLM); build evaluation harnesses for every generative workflow; curate training data with the Translator; ship the cost-tracking model; mentor the Data Engineer.

What we need. 5+ years shipping production ML; strong LLM fine-tuning and evaluation experience; comfort with messy real-world data; prior startup experience.

Compensation. \$260K base + 2% of the employee equity pool.

— ROLE 04

Full-Stack Engineer (Lead)

HIRE WINDOW: MONTH 4-6

About the role. Technical lead for the product surface — the React web app and React Native mobile app. Own the mobile capture flow (three taps + photo); build the PM dashboard and CEO portfolio view; lead frontend-backend architecture; ship the first module's UI by Month 6; mentor junior engineers.

What we need. 6+ years full-stack web + mobile; React + TypeScript; React Native; demonstrated ability to build for non-technical users; B2B SaaS experience.

Compensation. \$220K base + 2% of the employee equity pool.

— ROLE 05

Process Engineer

HIRE WINDOW: MONTH 4-6

About the role. Systematize construction workflows into shippable software. Work with the Translator to turn processes into specs; map the 12 accounting workflows and 15 functional areas with automation scores; build the workflow library; run time-motion studies; own workflow change management.

What we need. 5+ years industrial engineering or similar; prior construction or adjacent experience; data-analysis proficiency (SQL, Python); patient, systematic worker.

Compensation. \$180K base + 1% of the employee equity pool.

— ROLE 06

Data Engineer

HIRE WINDOW: MONTH 12-14

About the role. Build and operate the data infrastructure: event streams from field devices, time-series project data, and training pipelines. Own the Postgres + TimescaleDB layer; build ingestion for field events, accounting, and schedule updates; support the AI/ML Engineer; monitor data quality (95%+ capture SLA).

What we need. 4+ years data engineering; strong Postgres + time-series experience; Python + SQL; prior scaling-stage company experience.

Compensation. \$200K base + 1% of the employee equity pool.

— ROLE 07

Computer Vision Specialist

HIRE WINDOW: MONTH 14-18

About the role. Build the computer-vision capabilities: site progress tracking, PPE/safety detection, and photo-based quality flags. Develop and deploy CV models against real construction imagery; integrate with the field-capture flow; partner with the AI/ML lead on the model pipeline.

What we need. Computer-vision engineering experience; production model deployment; construction or industrial imagery a plus.

Compensation. \$240K base + 1% of the employee equity pool.

— ROLE 08

Assistant Project Manager (AI-augmented)

HIRE WINDOW: MONTH 1-2

About the role. Operating partner for Mission Control: run projects with platform support and pilot new automations in live use. Provide the feedback loop that keeps the build grounded in field reality.

What we need. 3+ years APM experience; comfort with new software; strong detail orientation.

Compensation. \$145K base + 0.5% of the employee equity pool.

— ROLE 09

Field Tech Liaison (internal promotion)

HIRE WINDOW: MONTH 2-3

About the role. Internal champion connecting field crews and the AI team. Drive training and the feedback loop; respected by crews; tech-curious. Sourced from existing LV field staff.

What we need. Existing LV field staff; credibility with crews; willingness to adopt and evangelize new tools.

Compensation. +\$30K retention + 0.25% of the employee equity pool.
