

PHASE 1		
Scope		
Preconstruction covers everything from project award through construction start. For the Extended BD plan, preconstruction quality determines margin on 30 deals; a 1% improvement in cost discipline is worth several million dollars across the plan.		
SECTION 1		
1.1 Estimating & Bidding		
Five automations scored 6.5–8.5.		
Automation	Current state	Score
Takeoff from drawings	8–12 hrs manual takeoff	7.5
Historical cost lookup	Estimator memory / spreadsheet	8.0
Sub bid comparison	Manual Excel comparison	8.5
RFI/clarification tracking during bid	Email + spreadsheet	7.0
Final GMP assembly	Hand-built spreadsheet	6.5
SECTION 2		
1.2 Contract & Buyout		
Five automations scored 8.0–9.0.		
Automation	Current state	Score
Sub selection ranking	PM judgment + spreadsheet	8.5
Contract generation	Template + fill-in by PM	9.0
Insurance/bond verification	Spreadsheet tracking	9.0
Scope-clarification RFIs	Email back-and-forth	8.2
Buyout-savings tracking	Manual variance report	8.0
SECTION 3		
1.3 Schedule Development		
Four automations scored 7.0–8.2.		
Automation	Current state	Score
Initial baseline from WBS	Manual P6/MS Project build	7.5
Resource leveling	Scheduler manual adjustments	7.0
Sub-schedule integration	Request + merge by hand	8.2
Risk/float analysis	Scheduler qualitative review	7.8

Extended BD Connection

With 30 BD deals signed on a roughly bimonthly cadence, preconstruction bandwidth is a bottleneck. Without Mission Control, the current team can handle 4–5 concurrent preconstruction engagements before quality degrades; the estimating and contract automations roughly double that capacity while improving accuracy through historical cost lookup trained on prior LV projects.
