

PHASE 2

Scope

Field operations is the most observation-intensive phase. LV is 100% subcontracted site management — superintendents coordinate subs but do not self-perform. This phase covers four functional areas with 16 automations.

SECTION 1

2.1 Daily Field Management

Daily reports, progress tracking, issue escalation, end-of-day wrap.

Automation	Current state	Score
Daily report generation	15-min written report	8.5
Progress vs. schedule	Manual PM comparison	8.0
Issue escalation	Verbal / ad-hoc	7.5
End-of-day summary	Manual or skipped	7.0

SECTION 2

2.2 Subcontractor Coordination

Attendance, 2-week look-ahead, crew deployment, sequence compliance.

Automation	Current state	Score
Daily sub attendance	Paper / verbal check-in	8.5
Two-week look-ahead	Manual merge	8.0
Crew-deployment tracking	Spreadsheet headcount	8.0
Sequence compliance	Visual PM check	7.5

SECTION 3

2.3 QC & Inspections

Punch list, inspection scheduling, compliance docs, nonconformance.

Automation	Current state	Score
Punch list	Photos + manual list	8.0
Inspection scheduling	Phone + calendar	8.0
Compliance doc capture	Paper sign-offs	7.5
Nonconformance tracking	Email thread	7.0

SECTION 4

2.4 Safety

PPE detection, toolbox talks, near-miss reporting, OSHA logs.

Automation	Current state	Score
PPE detection on photos	No systematic check	8.5
Toolbox-talk tracking	Paper sign-in	8.0
Near-miss reporting	Verbal / underreported	7.5
OSHA log assembly	Manual records	7.5

PLAN LINKAGE

Extended BD Connection

At peak concurrent projects (FY2030–31), field operations would need several new supervisors/APMs without Mission Control. With the platform, only the site-dedicated superintendents are required — the APM coordination work is absorbed.
