

SECTION 1

Operating Model Comparison

Function	Current (manual)	AI-driven (Mission Control)
RFI drafting	30 min per RFI, PM writes	5 min, AI drafts from spec references
Daily field reports	15 min per PM per day	3 taps + photo on mobile, AI synthesizes
Cost tracking	Updated weekly from accounting	Real-time, tied to field progress
Schedule updates	Weekly, by PM from memory	Daily, auto-generated from field data
Sub insurance / COI	Spreadsheet, manual reminders	Continuous monitoring, automated alerts
Draw packages	Assembled over 2–3 days	30 minutes, auto-assembled
Compliance monitoring	Quarterly spot checks	Continuous, flagged by system

SECTION 2

The Six Modules

SPRINT 1 • MO. 1–6

1. Document Intelligence

OCR + LLM RFI, submittal, and contract drafting, trained on LV's spec library and prior correspondence.

SPRINT 1 • MO. 1–6

2. Cost Tracking

Real-time cost curve tied to field progress; flags commitment-vs-billing drift and change-order exposure.

SPRINT 2 • MO. 7–12

3. Schedule Management

S-curve generation from field data; identifies delay risk 2–3 weeks ahead.

SPRINT 2 • MO. 7–12

4. Compliance & COI

Subcontractor insurance, license expirations, and safety compliance — automated monitoring and alerts.

SPRINT 3 • MO. 13–18

5. Draw Packages

Automated G702/G703 assembly with photo evidence, lien waivers, and insurance certs.

SPRINT 3 • MO. 13–18

6. Field Operations

Mobile app for three-tap field capture; replaces daily reports and most field paperwork.

SECTION 3

Technology Stack

Layer	Choice	Rationale
LLM provider	Anthropic Claude (primary) + OpenAI (backup)	Quality on construction-domain drafting
Document OCR	AWS Textract + Claude Vision	Handles drawings, specs, handwritten notes
Data layer	Postgres + TimescaleDB	Time-series field data, change events
API / orchestration	FastAPI + Temporal workflows	Long-running async pipelines
Frontend	React + TypeScript (web); React Native (mobile)	Speed of hire, shared codebase
Infrastructure	AWS (us-west-2), Terraform	Multi-region not needed at LA scale
Observability	DataDog + Sentry	Quickly diagnose field issues

SECTION 4

15 Functional Areas — Audit Framework

Each functional area is scored on five dimensions: automation potential, data availability, user-adoption risk, integration complexity, and ROI impact. The weighted framework drives sprint priority.

Phase	Functional areas	Focus
1 — Preconstruction	Estimating & Bidding, Contract & Buyout, Schedule Development	Drafting, cost discipline
2 — Field Operations	Daily Management, Sub Coordination, QC & Inspections, Safety	Data capture, coordination
3 — Project Controls	Cost Management, Change Orders, Scheduling, Documents	Highest automation surface
4 — Office & Admin	Accounting, Procurement, HR & Labor, Comms	Back-office absorption

SECTION 5

Gate Reviews & Dependencies

- **Month 6 gate** — Sprint 1 complete: Document Intelligence and Cost Tracking live on one project. Go/no-go for Sprint 2.
- **Month 12 gate** — Sprint 2 complete: Scheduling and Compliance live on three projects. Validate margin-uplift trajectory. Go/no-go for Sprint 3.
- **Month 18 gate** — Sprint 3 complete: Draw Packages and Field Operations live; full six-module platform deployed. Validate the next-wave hiring-deferral thesis.

The Base Case + Extended BD plan provides the revenue foundation: the first BD deal on the platform, the Construction-AI Translator hired early, and at least three active projects by month 12 to train the Scheduling module. Partner oversight check-ins are quarterly.
