

0 1

The Opportunity

A \$2 trillion construction industry, largely undigitized. LV Construction is positioned to become an AI-native general contractor and capture the operating leverage that traditional contractors cannot.

0 2

The Product

Mission Control: a six-module AI operating system that automates roughly 90% of construction coordination — document drafting, cost tracking, draw assembly, compliance, and scheduling — from a single source of truth.

0 3

The Numbers

Metric	Value
Contracted volume (GMP)	\$718M (41 projects)
Base Case (11 in-place)	\$238M
Extended BD (30 deals)	\$480M
Baseline cumulative NI (FY26–33)	\$19.4M
Mission Control uplift (illustrative)	~\$8.7M
Cumulative NI with Mission Control	~\$28M
Mission Control buildout	\$5.0M
Payback period	~24 months

Horizon note.

Cumulative consolidated net income is the running total of LV (GC) net income plus Six Peak net income from the Annual Summary of the updated pro forma (Base Case in-place + LV BD extended). The FY2026–33 figure of \$19.4M is the cumulative peak; including the FY2034 wind-down (a – \$3.2M year, as projects complete while overhead continues) brings the full-horizon total to \$16.3M.

0 4

The Mechanism

- ~150 bps margin expansion on \$480M of BD billing via cost-discipline automation (~\$7.2M)
- ~\$300K/yr in deferred next-wave hiring as the platform absorbs coordination work (~\$1.5M)
- A data moat — 41 projects training a proprietary AI layer no competitor can purchase

0 5

Why Now

78% of contractors are testing AI; fewer than 2% have deployed it at scale. The window for first-mover advantage closes in two to three years.

Six Peak is raising **\$5M at a \$15M pre-money valuation** (\$20M post-money) to fund the Mission Control buildout. The contracted pipeline funds operations and de-risks the platform investment; the raise accelerates the buildout and the data-moat advantage.
